

GARDINER TECHNOLOGY

Plain Speaking From..

...The Gardtec **Speech Dialler**

Gardtec Speech Dialler

The Gardtec Speech Dialler is capable of storing up to 4 telephone numbers along with 1 common message & 3 information messages. Ideal applications include alarm systems, medical alert & machine monitoring.

Introduction

The Gardtec Speech Dialler is flexible enough (through its programmable options) to lend itself to all types of applications. The unit is solid state and once programmed will remember all programmed settings (including speech and telephone numbers).

Line Requirements

The Speech Dialler may be plugged into any DTMF (tone) compatible telephone line. Two levels of line monitoring are available that allow the unit to be used on exclusive lines or lines sharing other telephones

Speech

The Speech Dialler is capable of storing one common message (usually the name and address of the protected premises) and up to three information messages.

User Code

The programmable user code allows for the unit to be turned On and Off, for access to the programmable options and for calls to be aborted if accidentally activated.

GLIT 0226/B
