

the Internal Sounder range

**Protect your property
with technology**

One of the largest selections of internal sounders available that is able to cope with all types of installation - every possible requirement has been designed into the GardTec Internal Sounder Range.

the Internal Sounder range

Intergard Features

103dB Output
Sounder current 140mA @ 12v
Selectable tamper circuit (volt free or via 1K resistor)
18 Minute timer
SAB/SCB selectable
Exit tone input OV or negative speaker driver
Adjustable entry/exit tone volume
Front & Rear Tamper

Gardsound Range Features

103dB Output @ 1m
Twin Piezo Sounders
Open PCB, SAB/SCB selectable via link
Tampered internal sounder (Gardsound 2)
Gardsound D is PCB only for use in existing housings
c/w 8.4v NiMH (Gardsiybd D, 2+ only)
450mA or 325mA current drainage

Soundgard Range Features

Twin & Quad disc design
102dB and 109dB output
Unique design

Piezostrobe Features

Twin disc sounder & strobe
106dB output
12v and 24v versions
1 Watt Strobe

Extension Speakers Features

Twin & Quad disc design
102dB and 109dB output
Unique design

Piezogard Features

110dB single piezo

Horgard Features

109dB output
Horn Sounder (TK03)

the Internal Sounder range

Today's installations are now demanding internal sounders with greater sound outputs. As generally recognised, the more sound output the greater the current drawn from the system.

Intergard

The Intergard offers a sound output of 103dB. When SAB is selected the power is taken from the control panel, when SCB is selected the power is taken from the battery. The Intergard 2 is uniquely efficient without the need for an additional extension speaker.

Gardsound Range

The Gardsound Range has been designed to fulfil the requirement for maximum sound output from an internal sounder. All models are capable of producing 118dB @ 1 metre, with low and high current consumption modes being selectable.

Soundgard Range

The Soundgard 1 is a twin disc piezo sounder complete with snap fit backplate which ensures fixing and wiring connections are not visible. Soundgard 2 is a four disc piezo sounder complete with snap fit backplate for a neat installation.

Piezostrobe

A combined internal sounder 1 watt strobe which offers superb aesthetics and is considered the most economical on the market. The sounder section has an adjustable tone facility and the strobe section has a through lens LED for power indication. The piezostrobe offers both audible and visual indication of activation. Available in 12v and 24v versions.
