

QUEST PIR Virtual Immunity to False Alarms

Specially developed for the electrical trade the quest represents the pinnacle of today's technology at a sensible price.

Extensive research has been carried out to discover the requirements of the electrician. This information has been carefully considered in order for the quest to be one of the most reliable and easy to use detector available.

The Quest's enviable feature list includes white light filter, selectable pulse count and exceptionally effective RFI immunity all working together to virtually eliminate false activation.

Though technically advanced the aesthetics of the Quest have not been forgotten. Moulded from polished white plastic and of a compact but easy to work with size the Quest will blend in perfectly with all decors.
