Stand alone alarm range

Suitable for flats and houses, sheds and caravans, the new stand alone alarm system offers the ultimate in flexible security.

The range includes two types of self-contained alarm units – PIR motion sensors and door contacts, each with built-in sirens and keypads.

Mix and match motion detectors and door contacts with the option of additional sirens and remote key fobs to create a stand alone alarm system to suit your individual requirements.

The new Yale stand alone alarms will not interfere with existing systems, making them an efficient, cost effective security choice if you're extending your house. You can arm an extension without disrupting your current alarm system.

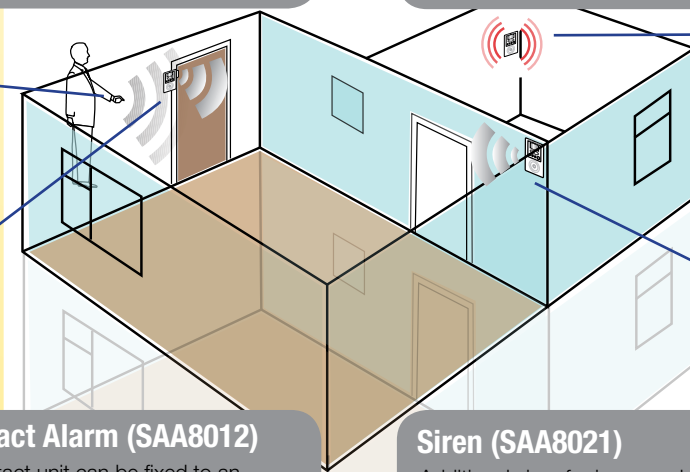

Remote Key Fob (SAA8031)

Enables you to arm and disarm your system from a distance.

PIR Motion Sensor (SAA8011)

The PIR motion sensor alarm can be wall mounted or placed on a window sill, shelf or mantelpiece to detect burglars.

Door Contact Alarm (SAA8012)

The door contact unit can be fixed to an internal door frame and is then activated if the door is opened.

Siren (SAA8021)

Additional siren for increased intruder alert.

Features & benefits

- 100% Wirefree - easy to install with no damage to décor
- Quick and convenient to install – 'touch and link' technology to easily add further products
- Maintenance free
- Portable - you can even take the unit with you on holiday for use in hotel rooms or caravans
- Contemporary design supplied in a gloss white finish, the components are a subtle addition to the home

'Touch and link' technology

Using 'touch and link' technology, your system is quickly and easily expandable. Once one of your units is set up, further units can be added by simply touching together the contacts on the front and back of each unit.
