Exclusive SIM card rates

SimEntry have negotiated special rates through a 3rd party network provider. We have SIM cards available from Vodafone, O2 or Orange with a range of low cost & hassle free options unlike pre-paid. It's not expensive by any stretch of the imagination to run any SimEntry System. They are not data intensive devices and the intercom system SIM cards are set up on some of the lowest call rates available.

How much does it cost to run a SimEntry system?

The following examples have been worked out using over-inflated numbers & peak time call costs (applicable to the GSM DoorPhone only) to give a worst case scenario outcome and an indication of how economical these systems are to run.

Annual cost examples of running Easy+ & GSM DoorPhone Systems...

GSM Access Control (with SMS management): The SIM card will cost £12.00 / year to run. If you program the system by SMS, it will reply by SMS so you incur SMS charges to send the SMS and receive the confirmation.

ANNUAL COST: Approximately £30 with an allowance of about 20 SMS changes / month.

GSM Access Control (with SMS & remote PC management): This system uses SMS management as well as remote PC data transfer. We suggest a £2 - £2.50 SIM card tariff (detailed below) because it includes 1MB of data transfer. The annual cost of the SIM card is £24-£30. The data charges are additional £1/MB and the cost is based on how often you update the system or request event logs by remote PC.

ANNUAL COST: Approximately £50.00 to run with a annual allowance of 20-25MB of data transfer.

Note: Considering a full 2000 User list is about 500KB, 20MB is an enormous amount of data transfer.

GSM DoorPhone (with SMS management): The SIM card will cost £24.00 / year to run. 35 SMS are included per month allowing you to add & delete users or change the call button numbers. Assuming you had 5 Visitors a day all year with an average intercom call of 20 seconds and a peak call rate of 9p / minute...

$5 \times 365 = 1825$ Visitors \times 20 seconds average call = 608 minutes call time \times 0.09p (peak) call rate = £54.72.

ANNUAL COST: Approximately £80.00 / year

SIM Card: £24.00 set fee

Calls: £54.72 at a high Visitor rate on peak rates all year with a higher than average call duration

SIM card Rates Jargon Buster

Line rental: The monthly set fee to have your SIM card. It may or may not include data or SMS as part of this fee.

Call charges: When a visitor presses your call button, the GSM DoorPhone makes a call to you. You are charged for the call at the SIM card tariff rates & will receive a statement each month.

Note: Easy+ Access Systems **do not** incur call costs.

Tariff: The tariff is a preset rate your system will operate on. The tariff may include some data or SMS allowance.

SMS Charges: You can manage & configure any **SimEntry** systems by SMS. The system will reply to you by SMS for confirmation. You are charged for the SMS at a low rate.

Data Transfer: The **SimEntry** access control system can be connected to remotely using a GSM remote programmer. The data transferred between the unit and your PC is charged at data rates of £1/MB over and above the included data in the set tariff.

256kb (quarter MB): This is the amount of data transfer included in the line rental

1mb (1000KB): This is the amount of data transfer included in the line rental

Remote PC Management: This is only available on the Easy+ Access Control System. The remote PC programmer transfers data to and from the Easy+ device. Data charges apply at the tariff rate.

SMS Management: All **SimEntry** devices can be configured & managed by SMS. SMS charges are incurred to use SMS management.

SIM Card Rates

VODAFONE

£1.00 / month (12 months)

Includes: nil

Charges: 0.07p SMS & £1.00/MB data transfer

Suits: Easy+ Access System with few User changes
