#### Brief overview of product range:

The ATG Access Genie MK II automatic bollard is a stainless steel automatic bollard solely for use on residential applications. The Genie MK II is operated by key fob and is a reliable, functional and stylish way of securing your driveway and property. Standing 500mm tall and finished in brushed stainless steel this bollard is a robust yet attractive solution to protecting your property.

Operated via a single button, remote control key fob - the Automatic Posts "rolling code" operation ensures that once in the up position the property is secure and unauthorised access is impossible. Slim line, stainless steel and with the signature ATG Access's reflective bands - this automatic bollard will suit any urban or rural residential scene.

This operating system comes with two key fobs as standard. If you require more due to multiple users needing access to your site - there is an option to purchase additional fobs.
