

# Multiswitch 3000

## GJD065

When evaluating and defining switching and lighting requirements for outdoor or indoor areas, whatever the application, the Multiswitch 3000 is a one stop source. For conservation of energy and reduction in light pollution the Multiswitch could be set for dusk to dawn switching or alternatively linked to passive infra red or other presence detection systems; which would only require activation of the power relays on an event. When the Multiswitch is combined with presence detection equipment the applications multiply again to incorporate the control of all low voltage switching devices such as CCTV recording, pagers, sounders or the GJD Multispeech voice enunciation module (see below).

### Specifications

- Two volt-free relay contacts suitable for low voltage and mains up to 1500 Watts each.
- Dusk to dawn lighting system.
- Alarm activated light control with 'light on' timer option of 1 to 24 minutes.
- Dusk to 'off' control with timer option of 1 to 8 hours.
- Or a dusk to 'off' followed by alarm activated until dawn.
- Also provides 12VDC @ 500mA to power cameras and / or other ancillary equipment.
