

# ASGARD HD Decoder

## Application Notes

The Asgard HD Decoder is a 30fps total through put, 1080p standalone unit, which facilitates the streaming of camera images from one or more media servers, without the need of a PC. This enables display monitors to be mounted remotely around the premises or network. The unit can be additionally controlled by simple CGI commands from control workstations or hand held devices. Simplicity of implementation and operation are the key features of the Asgard HD Decoder. By attaching a HDMI monitor, the Asgard HD Decoder will display any of the cameras on the system these can be displayed in full screen 1080p or quad. Applications include local viewing of video in retail outlets, education facilities, transport, banking halls and financial institutions.

## System components

- Cisco CVSM 7 and VSOM 6.3.xx compatible
- Can provide images of local and remote cameras
- Supports a large selection of IP cameras
- May be controlled by remote CGI commands
- Responds to events from remote devices
- Intuitive configuration via simple web pages
- Additional mounting bracket available
