PAC Credentials - Card & Token

The PAC's 153KHz PAC Tokens and ISO Cards are passive proximity devices requiring no batteries, designed to provide a quick and easy method of gaining access to an area secured by an Access Control System.

The PAC token provides flexibility, usability and user satisfaction in any access control application. Built to fit on a person's keyring, the tokens come with a variety of eleven different coloured clip-on bottoms which allow for simple identification, found invaluable in residential sites.

The ISO proximity cards are ideal for customers who wish to carry their identification in a wallet or a purse and also include personal security details. The card can be directly printed onto with additional information such as the cardholder's photograph or signature which could then be checked by a security guard, effectively increasing the level of security on the site.

Coupled with an access control system, the PAC Credentials range enables the movements of all users to be monitored, making the site secure and protected at all times.

The PAC Credentials take under half a second for the door reader to recognise and grant or deny access. As neither the tokens nor the cards have the unique ID number printed on the actual device, they can be easily replaced if lost or stolen and the original device's access privileges revoked from the system. This allows for a seamless and efficient way of maintaining the security of the premises.

PAC Credentials features and benefits:

- PAC ISO Cards and Tokens are compatible with all PAC's GS3 LF and MT Readers plus our legacy OneProx and PAC Reader range

- Versatile - the token easily attaches to a keyring or badge clip and has changeable clips

- Card meets ISO standards for thickness, allowing use with many direct image or thermal transfer printers

- Offers a unique identity code

- 'No batteries' design enables an infinite number of reads

- Token is of ABS construction and is double-sealed and ultra-sonic welded

- Lifetime guarantee against electronic failure

- Magnetic Stripe option with PAC cards

- Cards can be punched for connection to lanyard chains – hole guide provided with cards
